

LUBEALLOY

SPECIALISED LUBRICANTS

LA 260 Non-Staining Textile Oil

Description

Within all textile industries, it is imperative that the lubricant meets a number of critical recommendations on the high speed, tight tolerances that accompany the machinations of textile machines.

LA 260 Textile Oil is a superior quality blended textile spindle and thread oil. It is completely scourable and does not stain or mark fabrics and is capable of maintaining a cooler running temperature for long periods.

Oxidation Resistant

- Almost water white in appearance
- Oxidation resistance is markedly beneficial as the oil will not discolour within itself, thus eliminating the black staining of fabric

Tenacity

- Extremely high-speed performance
- During high-speed fluctuations of a sewing and threading machine, LA 260 ensures that all parts of the machinery are given maximum

protection during high-speed operations

- Ensures that all parts of the machinery are given absolute protection during high speed operations
- Eliminates wear on all moving surfaces and emulsification of the oil caused by temperature increases of the metal surfaces

Anti-Static

- Excellent anti-static agent which prevents the build up of static electricity on the thread
- May be operated at speeds of up to 20,000 rpm without the risk of thread breakage

Energy Drag

- Controls gumming by the way of specially incorporated viscosity adjusters
- Elimination of “drag” from gumming ensures power output and strain placed upon motors of sewing and threading machinery is eliminated
