SPECIALISED LUBRICANTS

LA 379 Motorbike Oil

Description

LA 379 Racing 4T is a high performance oil formulated with PARA-SYN™ recommended for four-cycle motorcycles which are used specifically for racing. It provides excellent performance in motorcycle engines that are designed with a common engine/transmission lubrication system or where the engine lubrication system is separate from the transmission system. LA 379 Racing 4T engine oil is formulated to provide the proper frictional characteristics necessary for wet-clutch engine/transmission systems.

Synthetic Technology

- Specifically formulated with advanced performance synthetic base oil
- Protects your bike in extreme situations from extended high-speed operation to prolonged idling in summertime traffic
- Conventional mineral base oils change viscosity as the temperature changes
- Provides a more shear stable and protective oil film for engine bearings, piston rings, transmission gears and other critical engine parts than conventional oil of a similar viscosity grade

Higher Viscosity

- Extended oil drain periods
- Oil maintains the desired viscosity to operate at peak performance
- Oil consumption is minimised as the oil effectively seals the higher ring areas
- Low temperature cold starts and engine protection

Shear and Thermal Stability

- High VI shear and thermal stable base oil
- Provides anti-wear protection to rings, cylinders, bearings, timing gear, valve train and all moving engine surfaces

Low-High Temperature

- Excellent flow characteristics at low temperatures to reduce engine wear at start-up
- Outstanding resistance to oxidation and/or volatilization at high temperatures
- Protection against engine wear under high-temperature and high engine speed conditions
