

LUBEALLOY

SPECIALISED LUBRICANTS

LA 188 All Purpose EP Grease with 3% Molybdenum & Tackifier

Description

This all purpose, PARA-SYN grease with TRILINIUM supplement is the last word in a general purpose maintenance lubricating grease.

Where standard naphthene grease supplied by the major oil conglomerates will bleed and separate in storage and particular in use, LA 188, will maintain its viscosity and lubricity. This leaves the user with the peace of mind that once the equipment is greased, it will do the days work without disappearing.

Extended Operational Hours

- Machinery of all types can continually operate and not be subjected to wearing parts due to lack of grease
- Long life grease recommended for anti-friction bearings, both low and high speed ordinary bearings, high and low load service conditions in hostile environments or where extended service is intended
- Fortified with rust, oxidation and corrosion inhibitors plus EP supplements

Compatibility

- Compounded for compatibility with conventional grease and blended to meet and exceed-manufacturers equipment specifications

Water Resistance

- Readily withstands the vigorous and often difficult shock loading and high heat encountered in mining where underground water and slush tends to inundate and saturate the equipment
- Provides its exemplary corrosion resistance to a wide variety of applications
- Water resistant to wash out, steam and acids

Rust and Corrosion Protection

- Rust and corrosion inhibitors protect the metal surface under the most adverse conditions

Oxidation Protection

- No open molecules in the inner structure and as the base oil is polyol ester and poly alpha olefin, it will stand against outside contaminants
- Accommodates variances of temperature to maintain the lubricating film between metal surfaces
